

Silentium to Present Its Active Noise Control Solutions at AHR Expo 2010

Innovative technology increases efficiency of HVAC while eliminating noise pollution

Rehovot, Israel – January 12, 2010 – Silentium will be exhibiting its ground-breaking, proprietary "Silence in a Chip" noise control solutions at **booth 4367** at the **AHR Expo**, on January 25-27 in Orlando, Florida.

Silentium's active noise reduction technology provides HVAC manufacturers and contractors a clear, green edge; it allows cooling and heating units to work at their highest, most energy-efficient speeds, significantly reducing operating costs.

The Active Silencer™ duct can be attached to any new or existing air exchange unit or imbedded near the air device without adding resistance to airflow. It automatically calibrates to its environment, eliminating more than 10dB(A) of broadband noise at the source.

"Including Silentium's environmentally friendly systems instantly gives HVAC manufacturers and installers a competitive edge while enhancing the environments they are creating," states Silentium CEO Yossi Barath. "Fatigue, stress, and hearing impairment are but a few of the symptoms people suffer from excessive noise, significantly affecting quality of life."

Manufacturers can easily integrate the Silentium technology directly into their mass-produced products, as the Silentium products automatically calibrate to reduce noise. Meanwhile, contractors can directly install the Active Silencer™ duct, saving time, labor, and material costs as it eliminates the need for long, complicated labyrinths and ducts to reduce noise.

"Manufacturers design strong and highly efficient systems that cannot be fully utilized due to the noise pollution restrictions," concludes Yossi. "With the simple addition of Silentium's invention "Silence in a Chip," they can maximize equipment performance while creating healthier, more pleasant living and working environments."

About Silentium

Silentium Ltd. is a leading innovator in spatial Active Noise Control (ANC) technology, developing innovative noise reduction solutions for both mass production and custom requirements.

Silentium's unique, cutting-edge noise reduction solutions deliver more than 10dB(A) noise reduction across the entire audio spectrum. Silentium's Active Noise Control solutions can be applied to myriad applications such as IT, HVAC, medical equipment, white goods, and more.
